AB	<p> Labeled title compds. are obtained by thermal phosphorylation of nucleosides which are heated at 155-65.degree. with an alk. metal phosphate or nucleoside 2'(3')-phosphate in the ratio 1:5. The mixt. is chromatographed and the products isolated from the eluate. Treating labeled nucleosides (¹⁴C, ³H, ³⁵S) with nonradioactive phosphates gives compds. contg. soft .beta.-emitters in the nucleoside moiety, reaction of unlabeled nucleosides with ³²P-phosphates gives compds. contg. a hard .beta.-emitter in the phosphate residue. The following nucleosides were phosphorylated: cytidine, uridine, pseudouridine, orotidine, deoxycytidine, deoxyuridine, thymidine; (with a change in the base) 6-azauridine, 6-azacytidine; (with a substitution on the base) 5-hydroxyuridine; (with a change in the sugar) N-xylosyluracil; (antibiotics) tubercidine. </p>				
IT	29838-80-0				
RL	RCT (Reactant)				
	(reaction of, with labeled sodium phosphate)				
RN	29838-80-0	CAPLUS			
CN	as-Triazine-5,6- ¹⁴ C2-3,5(2H,4H)-dione, 2-.beta.-D-ribofuranosyl- (8CI)				

(CA INDEX NAME)

Absolute stereochemistry.
